Screener

OIC Practice Pit: Virtual Options Trading Simulator

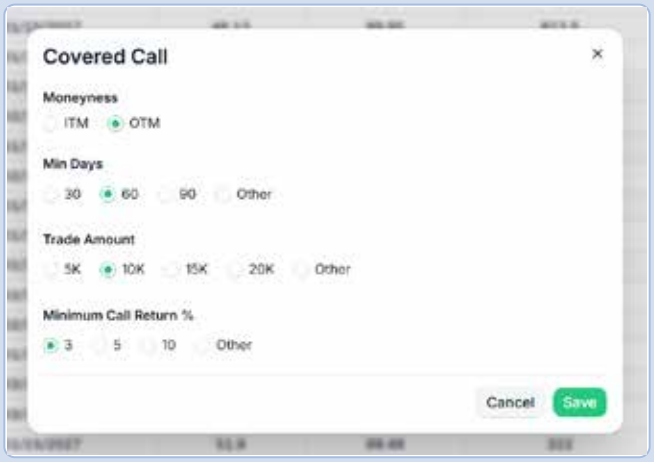

The Screener scans the market for option setups that match a strategy and a set of filter criteria, so you don't have to check symbols one at a time. Choose a strategy, set your criteria, and the platform returns the trades that fit. Market data is delayed by at least 20 minutes.

Setting up a scan

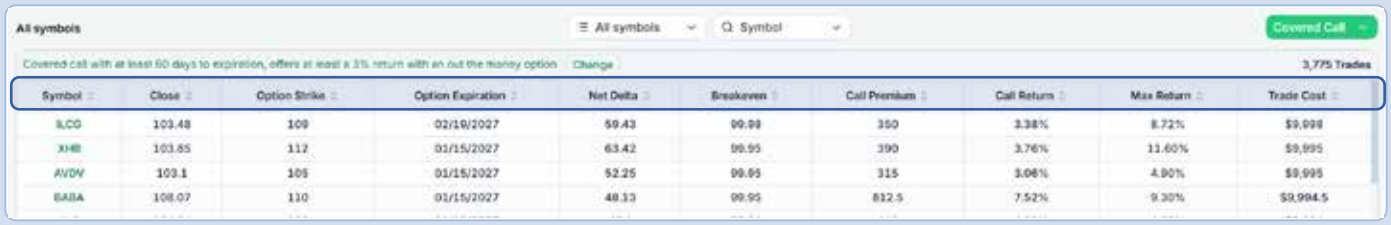

1 **Strategy:** Choose a strategy, such as Covered Call, Married Put, Bull Call, Bull Put, Bear Call, Bear Put, Iron Butterfly or Iron Condor.

2 **Symbol universe and search:** Scan all symbols or narrow the scan to a group such as the Dow Jones 30, NASDAQ 100 or S&P 500. You can also search for a specific ticker.

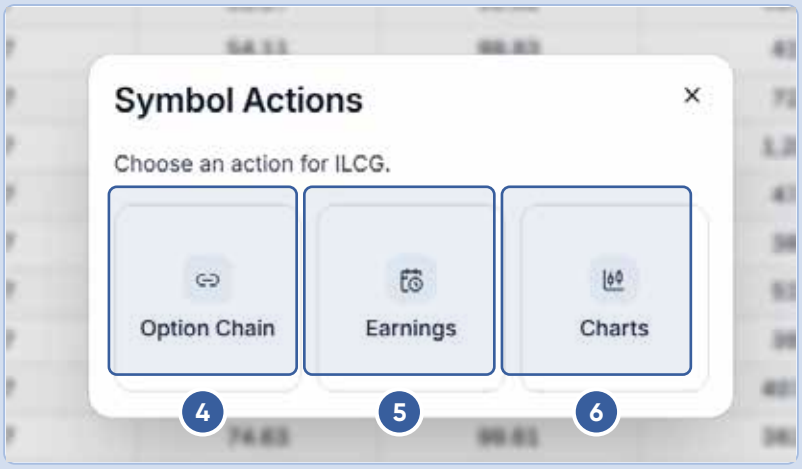

3 **Criteria:** The line across the top describes exactly what the scan is filtering on, along with the number of trades found. Click **Change** to adjust it. For a Covered Call, you can set the moneyness (in or out of the money), minimum days to expiration, trade amount and minimum call return %. Each strategy has its own criteria.

Reading the results

The table's columns change with the strategy you've selected. A Covered Call scan shows figures like option strike, expiration, net Delta, breakeven, call premium, call return, max return and trade cost. An Iron Condor scan shows each leg's strikes, upper and lower breakevens, trade cost and max profit. Click any column header to sort.

Researching a symbol

Click any symbol to open a menu of next steps:

4 **Option Chain:** See the contracts available for that symbol.

5 **Earnings:** Review upcoming and past earnings.

6 **Charts:** Analyze price history.

Placing a trade

Click the green **Add** icon on any result row to open the New Position window, pre-filled with that setup's strategy, strikes and expiration. You can review the summary and risk graph, adjust anything you like, and click **Create Trade**.

Things to keep in mind

- Start with a strategy, then tighten your criteria gradually. Overly narrow filters can return zero results and hide setups that were close matches.
- Use the Add icon to skip entering strikes and expirations by hand once you've found a setup worth trading.
